JOURNEY THROUGH XR

The RandomCorp™ company is a French multinational information technology (IT) services and consulting company, headquartered in Paris, France. Since their foundation in 1967, they've gone through more than 42 mergers and acquisitions, including with Blue, former French public telecoms monopoly. They became internationalized following this takeover and has pursued an expansionist policy since.
The company has, over the years, branched out into selling digital content, e-commerce services for artisanal plant-based snacks, online advertising, M2M communication between smart fridges and coffee machines, home automation that can schedule your pet's naps to sync with your sleep cycle, and remote assistance solutions with holographic tutors. In 2023, all of these ventures combined generated over €43 billion in revenue.

Recently, they've **partnered with you** to launch JTGHXR, a European start-up accelerator focused on mixed reality products.

You've been given 3 potential product briefs based on competitor's projects. As a project manager, **the choice is yours** on which of them to go through with.

The first follow-up for this project is to be treated as a meeting with your manager :

- ✓ You will explain the choice you made
- ✓ You will present a **storyboard** detailing how you want your XR experience to look like
- ✓ You will talk about your group organisation. Who has which role, what goals you've set...

At one point (which is for now scheduled at the beginning of the last week of the project) **you'll be given assets** that the RandomCorp™ Media division is working on.

The deadline for this project represents a meeting with the higher-ups where you will have to present :

- ✓ A fully-functional **Proof Of Concept** made with either primitives of the assets from the RandomCorp Media drop. No other asset should be used.
- ✓ A **promotional video** focusing on user needs and highlighting your key features

Project #1 - First Aid Training Modules

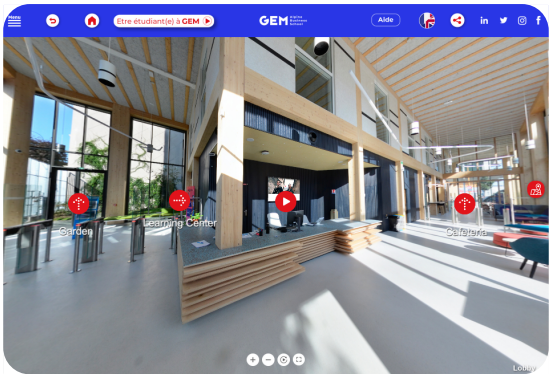
Help XR is an immersive augmented reality training application dedicated to first aid techniques. Based on the official guidelines, it offers an innovative solution for raising awareness, training, and refresher courses in first aid, whether for novices or professionals looking to keep their knowledge up-to-date.

Through realistic and interactive scenarios, Help XR immerses users in simulated emergency situations, allowing them to practice essential techniques safely and engagingly. Each scenario is designed to reinforce memorization and build confidence, helping users develop the right reflexes to intervene quickly and effectively in the event of an incident.

Project #2 - Virtual Tour & Virtual Open House

Virteem is a digital immersion platform specifically designed to support students and their families in choosing their educational path. By combining a guided virtual tour with an in-person meeting, Virteem offers a hybrid experience accessible to everyone, without travel constraints.

Thanks to hyper-realistic 3D environments, users can explore the school's infrastructure: classrooms, laboratories, recreational spaces, sports fields, and student life areas. Each tour scenario is designed to highlight the school's strengths and allow visitors to envision their future daily life there.



Project #3 - Raising Awareness of Domestic Risks

Virtual reality home accident training is another way to raise awareness among your teams and prevent the risks of home accidents (electricity, ventilation, etc.) for themselves or their loved ones. According to a study, one in two everyday accidents is a domestic accident, and the number of deaths resulting from this type of accident is estimated at 20,000 each year.

Most people only understand and assimilate a danger after experiencing it. In fact, an individual retains 20% of what they hear and 90% of what they do. To address this, VR is used by **Immersive Factory** to send your employees on a risk-hunting adventure in a 3D-modeled home.
